

Features of the Sentinel™ Series Model 7500

◆ MAGNETIC CARD READING CAPABILITY

Increase the payment options for your customers and increase user satisfaction. Your customers can simply insert their magnetic stripe bank and/or calling cards for convenient call payment. The Model 7500 can be programmed to automatically process each call based on the card used by the customer.

◆ CALL REVENUE AND COST VERIFICATION/ CALL DETAIL RECORDING

The Model 7500 records information about each call made from the payphone. This information can be used to aid in verifying Dial Around Compensation, Operator Service Provider commissions, long distance bills, local measured usage charges, call volume discounts and other call-related items.

◆ IN-SERVICE ABILITY TO UPGRADE

You can buy what you need today, and sleep easy knowing that you can upgrade your Model 7500 payphones in the future as your needs change. The Model 7500, with its affordable, feature-rich base chassis, is designed to allow you to add additional features by installing optional plug-in electronic circuits. With the Model 7500, you will be able to adapt your payphones and your payphone route to the growth of your payphone business.

◆ ASSET MANAGEMENT TOOLS/ ELECTRONIC SERIALIZATION

Tracking your payphone assets is easier than ever before with the Model 7500 electronic serialization. Each Model 7500 chassis and each available option board contains a nonerasable electronic serial number and automatically reports the location of each chassis and option board to the management software, providing positive board identification.

◆ PAYPHONE MANAGEMENT SOFTWARE

Protel's PC-based payphone route management software provides a method to keep you up-to-date on your telephone's performance. The software easily communicates with your phones to give them call rating and routing information, operating parameters, collect call data records, and generate a variety of useful management reports.

◆ LEAST COST ROUTING/CALL PROFIT MAXIMIZATION/CALL REROUTING CAPABILITY

Using the Model 7500 call routing features, you can route your long distance calls to the least-cost carrier and at the same time, route your operator-assisted call to the Operator Service Provider offering you the best options in commissions and services. In fact, you can even utilize multiple carriers and OSPs.

◆ SMART CREDIT™ AUTOMATIC TROUBLE OPERATOR

Increase customer satisfaction and decrease the cost of providing refund service with the Model 7500 Smart Credit™ Automatic Trouble Operator. This allows a trouble operator to verify coin deposits, issue credits and/or dial a destination number while on the line with a caller, eliminating costly refund checks for 211 service calls and increasing instant customer satisfaction.

◆ STORE & FORWARD CAPABILITY

The Model 7500, when used with Protel's ExpressNet III® payphone management software, is equipped with all the call processing and billing collection tools you need to establish your own Store & Forward Operator Service Provider right in the telephone. And with Protel telephones, you choose your own validation, billing and collection partners to maximize your profits.

◆ PROTECTIVE COVER

Minimize unintentional chassis damage with the Model 7500 protective chassis cover. You'll be pleased with this protective cover, which surrounds the electronic components to protect electronic devices from mishandling and abuse.

◆ REDUCED SERVICE COSTS/DOWNLOADABLE MEMORY

The Model 7500 includes downloadable memory, which eliminates the need for costly site visits to change operational programs that may be required to keep up with the changing payphone business.

◆ IN-SERVICE UPGRADE MEMORY

Socketed memory devices and configuration jumpers allow you to upgrade memory capacity of the Model 7500 without removing the telephone from service. The changing payphone business may some day demand features that require more memory than is used today. With the Model 7500, you will be ready to respond to those demands.

◆ ADDITIONAL FEATURES

- Modular design simplifies field installation
- Trouble diagnostics assist service dispatch and telephone service
- Voice error messages assist telephone service
- Cash box status and reporting
- Anti-fraud design
- Compatible with external vault alarm switch
- Communicates with Protel's payphone management software
- Missing handset detection circuitry
- Voice prompts enhance user friendliness
- Automatically corrects protocol dialing errors, increasing customer satisfaction
- Compatible with external volume control switch
- UL-recognized on-board self-resettable surge protector
- Standard built-in electronic ringer
- DTMF and pulse dialing capability
- Patented and proven line-powered technology
- UL listed
- FCC registered

◆ MODEL 7500 OPTION BOARDS AND ACCESSORIES

- Electronic Coin Scanner (ECS II) Interface
- Mars Electronics® MS-16 Interface
- Bell 212-A (1200 baud) DPSK Modem Interface
- Coin Line Interface
- Mechanical Double Gong Ringer

► TIME MACHINE

Journey Out of the Past and Into the Future With Protel's New Sentinel™ Series Payphones – Tomorrow's Full-Featured Payphones, Today.

Designed especially for today's Independent Payphone Providers (IPPs) / Payphone Service Providers (PSPs), Protel's Sentinel™ Series Model 7800 provides station-based intelligence that is compatible with COCOT/COPT coin line functions.

This smartphone permits basic coin service, as well as the use of credit and calling cards with an insertion-type card reader. The same reader accepts a variety of the latest payment medium, the smart card, including the widely used Eurochip card.

Three optional displays on the Model 7800 each feature two lines of text, 20 characters per line, and are capable of scrolling customer advertising.

The Model 7800 includes six programmable feature buttons for language selection, volume control, next call control, speed dials, etc.

The Model 7800 is designed to function as a stand-alone smartphone in conjunction with your current public telephone operation. When combined with Protel's payphone management system software, this telephone will help you operate more efficiently by offering such features as:

- Complete Call Detail Records (CDR) for dial-around call auditing
- Electronic serialization to facilitate asset tracking
- Smart Credit™ Automatic Trouble Operator for instant response to customer coin problems
- Protective chassis surrounding smart electronic assembly
- Remote diagnostics
- Remote polling and programming

The Model 7800 is available as a complete telephone using Protel's rugged HABITAT® paystation housing.

Modular Plug-In Option Boards and Accessories

- Electronic Coin Scanner (ECS II) Interface
- Mars Electronics® MS-16 Interface
- Bell 212-A (1200 baud) DPSK Modem Interface
- Mechanical Double Gong Ringer
- Coin Line Interface

A1-8

Features of the Sentinel™ Model 7800 Payphone

◆ MULTIPLE PAYMENT METHODS

The Sentinel™ payphone accepts coins, major credit cards, calling cards and smart cards, sometimes called Integrated Circuit Cards (ICC). Smart card programs like EuroChip are easily supported.

◆ DISPLAY

The Sentinel™ payphone is available with several types of displays, and has two lines with 20 characters per line. For line-powered applications, a Liquid Crystal Display (LCD), can be chosen. For sites where the provision of external power is available, or a higher visibility display is required, a Vacuum Fluorescent Display (VFD) is available.

◆ SET-BASED OPERATION

The Sentinel™ payphone works with Plain Old Telephone Service (POTS). Like all other Protel products, it is designed to operate on loop-start, coin-line pre-pay, post-pay or B1 line. Since call rating is done in the telephone, your customers are connected to the called party with minimum delay. All Call Detail Records (CDR) are encrypted in the memory of the phone and periodically uploaded to the management system.

◆ VOICE PROMPTS

Today's payphone environment is multilingual. User selectable languages make the Sentinel™ payphone easy to use.

◆ SMART CREDIT™

AUTOMATIC TROUBLE OPERATOR

Increase customer satisfaction and decrease the cost of providing refund service with the Model 7800 Smart Credit™ Automatic Trouble Operator. This allows a trouble operator to verify coin deposits, issue credits and/or dial a destination number while on the line with a caller, eliminating costly refund checks for 211 service calls and increasing instant customer satisfaction.

◆ CAPABILITY TO UPGRADE AND EXPAND

Any Sentinel™ phone can be upgraded and/or expanded in the field with minimal effort and expense. This gives you the most flexible product in the industry, and minimizes your inventory and service cost.

◆ PAYPHONE MANAGEMENT SOFTWARE

Protel's PC-based payphone route management software provides a method to keep you up-to-date on your telephone's performance. The software easily communicates with your phones to give them call rating and routing information, operating parameters, collect call data records, and generate a variety of useful management reports.

PRINTED IN THE U.S.A.

ROTEL'S FIRST electronic kit assembly for a pay telephone was introduced in 1983 and swiftly became a system standard with GTE and many Bell operating companies. In June 1984, the Federal Communications Commission ruled to allow registration of privately owned payphones for connection to the telephone network. Subsequently, Protel embarked on a program to develop a full line of proprietary paystation products incorporating all of the features being demanded by the industry. Today there are more than 350,000 Protel "Smart" line-powered payphones in service in the United States and Internationally.

ROTEL'S PRODUCTS are microprocessor-controlled, telephone line-powered and include options such as credit card, calling card and chip card reading capabilities, speed dialing, select-a-carrier button operation, and telemetering for reporting coin box and operational status. The product line features electronic retrofit kits designed for adaptability to all standard pay telephone housings currently in use in the United States. In addition, Protel has rounded out its product line with desktop credit card phones, electronic coin mechanisms, telephone test equipment, payphone management software, and its own HABITAT SERIES® line of paystation housings and components.

ROTEL HAS EXTENSIVE experience working with Independent Payphone Providers, telephone companies and industry suppliers to define and evaluate products to achieve system acceptance and facilitate customer profitability. This is an ongoing process at Protel, ensuring the production of reliable products that meet the needs of the Domestic and International markets.

PRODUCT LINE: Protel serves the total telecommunications market with "Smart" and "Bright" paystation products available as retrofit kits or complete phones using Protel's HABITAT SERIES® paystation housing and hardware components.

TECHNOLOGY: Protel's goal is to provide increased profitability to you, our customers. Since our inception, we have designed line-powered products that give you the highest degree of reliability and ease of installation. In June 1995, Protel became fully certified to ISO 9001. Our payphones offer you state-of-the-art technology, reducing product life cycle costs and increasing efficiency. You can feel confident that Protel will support you once you have purchased your payphones. We offer you expert 24-hour technical support.

STRENGTH: Protel was founded in 1983. In August 1989, Protel merged with Inductotherm® Industries, a worldwide conglomerate of more than 60 companies and more than \$500 million in annual sales. This merger provided Protel with the resources necessary to become a recognized leader in the public telecommunications industry. Protel's decision in 1992 to vertically integrate its product line, and our entry in 1993 into International markets, will continue to provide significant growth into the next decade.

MANUFACTURING FACILITIES: Protel's 60,000-square-foot corporate headquarters and production plants are located in Lakeland, Florida, providing Management Offices, Engineering Labs, Research and Development, Final Assembly, Quality Control Operations and International Offices.

Dura-Smart[®]

Wall Or Counter Mount Pay Telephone

U.S. & International Patents Pending

**A NEW GENERATION PAYPHONE DESIGNED FOR
STRENGTH, INTELLIGENCE, AND RELIABILITY**

A1-12

Until now if you wanted a good looking durable commercial pay telephone you had to spend big bucks and be an experienced payphone technician to service and program your phone. Many businesses settled for cheap plastic desktop payphones or no payphone at all because they simply didn't have an alternative.

Dura-Smart is the affordable answer to all of your pay telephone needs and can replace a conventional payphone for about half the price. Now you can afford to put a payphone in low traffic locations or install more phones in busy locations for the same money.

Dura-Smart installs easily on any wall, counter top or existing payphone backplate and plugs into a standard RJ-11 jack or can be hardwired.

Dura-Smart not only looks like a public payphone, it operates like one as well, so your customers already know how to use it. Friendly voice prompts instruct the user how much money to deposit and Dura-Smart's answer detection circuitry automatically collects money on completed calls or refunds it on busy or incomplete calls.

Dura-Smart has far less moving parts than conventional payphones and has been designed to provide years of reliable commercial use. Modular construction allows complete disassembly of all major parts in minutes and our short coin path dual selenoid escrow virtually eliminates coin jams. If a bent coin or slug is encountered, a simple twist of the coin release will solve the problem in seconds.

Dura-Smart will work for most locations right out of the box using it's default settings or you may use it's keypad to custom program call rates, time limits, pbx codes, free, and restricted calls.

For complex calling areas that have overlapping area codes or extended toll bands, our programming department can call Dura-Smart's internal modem and remotely program it with your state rate table for a small fee. This will allow Dura-Smart to break your calling area into hundreds of toll bands based upon the distance of the calls being made and will ensure that you make the maximum profit on every call.

Owners of multiple Dura-Smart units can purchase our "RAMS" software package so you can remotely program and monitor your phones using your personal computer and modem.

Dura-Smart is manufactured by Telesys Inc. in cooperation with Payphone Technology Inc. and is the result of over 40 years of combined experience in the payphone industry. The Dura-Smart is proudly designed, manufactured and assembled in America.

A1-13

BETTER THAN BELL

Bell Style Phones Can't Compete

- ⊗ Cost twice as much as Dura-Smart
- ⊗ Can't mount on counter
- ⊗ Complex programming
- ⊗ Requires prior technical experience
- ⊗ Mechanical coin switches
- ⊗ Relay uses mechanical contacts
- ⊗ Relay contacts require timing
- ⊗ Require 6" side clearance
- ⊗ Requires more wall space
- ⊗ Complex non modular design
- ⊗ Numerous electrical connectors
- ⊗ Volume button costs extra
- ⊗ Longer coin path easily jams
- ⊗ No line power diagnostics
- ⊗ Needs external battery charger

FLEXIBLE WALL OR COUNTER MOUNT

The Dura-Smart® gives you all the features you would expect from a commercial steel payphone in a price range competitive with inferior plastic desktop phones.

PLASTIC "FAT PHONES" ARE TOYS COMPARED TO DURA-SMART

Why spend money on a toy that won't do the job right

4 lbs.

Obsolete as soon as your phone company adds new area codes or prefixes

- ⊗ Low quality plastic
- ⊗ Require separate wall mount
- ⊗ User must press "Talk Button"
- ⊗ No voice to guide user
- ⊗ No coin release... jams = repair
- ⊗ Most won't accept nickels or dimes
- ⊗ Odd looking "Ugly" design
- ⊗ Case cracks & scratches easily
- ⊗ Coin box is not vandal proof
- ⊗ Handset cord breaks or frays
- ⊗ No volume button
- ⊗ Limited programmability
- ⊗ Edge stacking coin mechanism
- ⊗ High repair rate = lost revenue

Dura-Smart quality and reliability makes it a profitable investment

- ☺ Durable steel case
- ☺ Mounts to wall or counter
- ☺ Automatic answer / refund detect
- ☺ User friendly female voice prompts
- ☺ Coin release rejects bent coins /slugs
- ☺ Accepts quarters, dimes and nickels
- ☺ Streamlined modern design
- ☺ Scratch resistant powder coating
- ☺ Protected internal coin box
- ☺ Metal "Lanyard" handset cord
- ☺ 3 Step external volume button
- ☺ Keypad and remotely programable
- ☺ Reliable bucket "Escrow" holds \$4.75
- ☺ Designed for reliable long term service

15 lb

Software programmable keeps up with changes your calling area.

FEATURES

- ✓ Vandal resistant steel case with scratch resistant powder coat finish.
- ✓ Dual function design for easy wall or counter top mounting.
- ✓ Internal steel coin box holds over \$180.00.
- ✓ Hardened lock protects internal cash box and prevents access to mounting bolts.
- ✓ Durable lexan handset with internal steel lanyard cable for added strength.
- ✓ Modular construction for reliable service and ease of maintenance.
- ✓ External 3 step volume control button for loud environments.
- ✓ Programmable via key pad or remote computer using "RAMS" software.
- ✓ Call rates, time limits, free, and restricted calls can all be programmed via the keypad.
- ✓ Anti-Fraud feature eliminates hook tap dialing & mouth piece tone dialers.
- ✓ Accepts nickels, dimes, and quarters and all major calling cards.
- ✓ Large capacity jam resistant escrow coin mechanism stores up to \$4.75
- ✓ Electronic answer detection means coins are collected or refunded automatically.
- ✓ Natural voice prompts guide the user to deposit the proper amount of money.
- ✓ Reliable electronic coin mechanism does not use switches to detect coins.
- ✓ Compatible with PABX phone systems, answering machines, pagers etc.
- ✓ Surge protection fuses protect electronics against lightning and voltage spikes.
- ✓ Blocks 1900+, 976, select international and inbound collect calls.
- ✓ On board diagnostics monitor all phone functions and test phone line voltage.
- ✓ Full factory support for remote programming and rate table updates.
- ✓ F.C.C and E.T.L approved unit plugs into any wall jack or may be hard wired.
- ✓ Coin tones notify user for each coin deposited into the phone.
- ✓ Full 2 year warranty covering all internal parts.
- ✓ Phone line powered...requires no external transformers or batteries.
- ✓ External coin release expels bent or jammed coins and slugs.
- ✓ 12 storable speed dial numbers useful for commonly dialed calls or advertising.
- ✓ Call routing to I.X.C (Inter Exchange Carriers) and OSP (Operator Service Providers).
- ✓ Self diagnostic service codes tell owner of any component failure or if coin box is full.

OPTIONS

Backplate Mounting Kit

When replacing an existing payphone, use our optional mounting kit to cover the original footprint.

Hides unsightly wires, displays universal phone sign and provides space for advertising.

Use free speed dial numbers to access advertisers listed on the phone such as hotels, cab service, rental car etc.

Remote Access Management Software

R.A.M.S.

Remote Access Management Software

Owners of multiple payphones can monitor and generate call reports for each phone.

Provides management reports such as: money collected, call counts, numbers dialed, call durations, operator & coin-free calls, etc.

Allows remote downloading and manipulation of rate tables containing area code/prefixes. Set any call for any rate band. Requires Computer running Microsoft Windows and modem. Includes operation manual and 1.44 diskettes.

Electronic Coin Handling System (ECHS)™

Slugs, bent or dirty coins, or even deliberate stuffing can jam an ordinary coin mechanism in a pay telephone. That means costly, time-consuming repair calls. The new Electronic Coin Handling System (ECHS) from Intellicall™ solves these problems.

Intellicall's ECHS incorporates a coin clearing inlet

designed to defeat stuffing. The ECHS also employs an electronic coin validator produced by the world's leader in magnetic coin validation; it eliminates the risk of slugs and further reduces the chance of coin jams. The system also defeats most "dip-stick jammers" and other coin thieves. Available as an option on new Intellicall payphones.

Specifications

Operating Temperature:

– 25° to 60° Centigrade

Operating Humidity:

5% to 95% Relative Humidity
(noncondensing)

Dimensions:

6" × 5" × 14"

Weight:

1.2 lbs.

Upgrade Option Includes:

Inlet Chute
Electronic Coin Validator
Reject Chute
Accept Chute
Trash Chute
Mounting Chassis
Return Linkage

Features

- Two Piece Inlet Chute
 - designed to prevent stuffing
 - opens to release foreign material
 - resistant to physical damage from metal probes
- Electronic Coin Validation is provided by the MARS MS 16*

- Available as an option on Intellicall Coin Phones:
 - 3003E
 - 3103E
 - 1030E
- Patent pending for ECHS technology

- Simple Installation
 - chassis mounted by two screws
 - return linkage mounted by one screw
- Coin inlet is blocked if foreign material is lodged in the inlet chute.
- Significantly reduces coin jams.
- Significantly reduces service calls.
- Upgrade kits for Intellicall Coin Phones
 - Kit for models 3003 and 3103 use Intellicall PN 74-01-03409-01.
 - Kit for model 1030 uses Intellicall PN 74-01-03409-10.

Payphone Programming

Elcotel, Protel, Ernest, Intellicall, Dialers, and Smartphones.

We provide programming across the U.S.A. including Hawaii and Alaska.

General initialization of your phones directly from our location in Albuquerque, NM. We program your payphone usually within 25 minutes once we discuss the parameters you would like programmed, such as call costing and other services.

Some general things to consider:

- How much to charge for a local call, how much time, or is the call timed at all?
- What to charge for long distance calls, intra-lata, and inter-lata?
- 1-411 calls?
- 1+ long distance carriers?
- Do you want to allow international calls?
- What number do you want the payphone to call if there is a problem?
- What number do you want the payphone to call for refunds/service?
- How about FREE numbers that require no coin?
- Do you want the phone to accept incoming calls? If so, do you want a time limit before the phone disconnects?
- Does your location support 911?
- Do you have a RELIABLE operator service?

These are some of the questions we will ask you before we program your payphone(s).
You may also want to take a look at our consulting services.

Prices:

A general download for Elcotel S3, S4 or S5, Protel 2000-7000, Ernest 7D1, 7D3, Intellicall 200 complete with a rate file that covers the ENTIRE U.S.A.: \$25.00 / Paystation. ←

Substantial discounts are available for multiple downloads and/or subscription to our operator services.

We have a fair amount of accounts with several operator service providers which allows us to level in the OSP market. We can, in turn, pass on higher revenues to our vendors, making our rates better than an individual IPP with only a few phones.

At COMTECH ABQ, we strive to provide the best service for the amateur just starting in the business, as well as the refined payphone provider. We have been in the business for over nine years and understand how the system works and are willing to help the newcomer get started properly.

Tabletops Taking Off — Here's Why

Low-cost, high-return tabletop coin phones may offer a solid business opportunity to more people than any other product now available.

Their low price and ease of installation — just plug them into a standard wall jack — make these pay phones a profitable choice anywhere traffic does not justify a traditional wall-mount unit.

The tabletop phone has increased dramatically in capability, as falling costs of microprocessors and increasing memory capacity permit more programming options with minimum price increase. These phones can now handle almost any dialing pattern in the country.

The low start-up cost of desktop phones enables the professional vendor to stake out a sizable market area much more quickly than with wall-mount units. At the same time, scores of individual small businesses find the tabletop models a simple solution to misuse of phones by employees and customers. Indeed, a surprising number of business owners who originally purchase the phones as end-users, find the tabletops such a viable business that they become distributors. With a current estimated market penetration of only 3 to 5 percent, the versatile tabletops are poised to become the standard instrument for pay phone traffic.

Telco Intercontinental Corporation, the largest manufacturer of tabletop phones, has, since its beginnings in 1985, carved out a 50 percent market share by offering the full capability of a manu-

facturing facility, plus a state-of-the-art programming and technical support department. Telco establishes longstanding relationships with its distributors, in which the company provides outstanding products and unsurpassed services to its customers;

customers in turn provide the feedback which directs Telco's research and development program. This cycle results in a constantly upgraded product line, featuring tabletop phones that come closer to duplicating the capabilities of a wall-mount unit than any other models

available.

Telco offers a full range of FCC registered and UL certified tabletop models: local and long-distance styles, with each style available as quarters-only or multi-coin capable. Volume control handsets are available on all models, and an optional lock-up banker provides security and increases coin capacity by 500 percent.

To increase the revenue of Telco pay telephone owners, Telco now offers a new 0+ service. Offered through American Payphone Management, headquartered in Austin, Texas, the program allows the owner to collect revenue from every operator assisted call made from the phone, without interfering with the present provider on 1+ traffic. This service is possible through special technology.

Improving technology and the changing needs of the marketplace will continue to bring tabletop phones to the forefront of the pay phone industry. No company is better prepared to provide the needed products and services than Telco Intercontinental Corporation.

LOW COST HIGH RETURN TABLETOP COIN PHONES

PROFIT PHONE

Here is your tabletop check list:

- Line Powered

Profit Phone® Tabletop Payphones and Lock-Up Banker

Model 707 - makes 7 digit and 1+800 calls and only accepts quarters. At time of placing order, factory can set up phones to allow local multi-area code calling and beeper access. Operator, ringer and time limits are controlled through dip switches located on bottom of phones.

Model 727-25 or 727-20 - makes 7 digit and 1+800 calls, with a choice of 25¢ or 20¢ charge for local calls. Accepts nickels, dimes and quarters. At time of placing order, factory can set up phones to allow local multi-area code calling and beeper access. Operator, ringer and time limits are controlled through dip switches located on bottom of phones.

Model 757 - features include those of the 707, plus local and long distance call capability and 10XXX rerouting of 0+ calls. It has an LCD display for user friendly instructions and accepts quarters only, holding up to six in escrow. All programming is done with an EPROM chip at time of placing order.

Model 767 - features those of the 727 local and long distance call capability and 10XXX rerouting of 0+ calls. It has an LCD display for user friendly instructions, and accepts and holds in escrow up to five nickels, six dimes or four quarters. All programming is done with an EPROM chip at time of placing order.

Model 777 - our optional lock-up banker, which allows all four to be locked up and secured to a wall or countertop. Along with the additional security, owners enjoy the increase in coin capacity from \$50.00 to \$250.00

• *At Profit Phones, Inc., we offer proven marketing techniques and superior products to assure your success. We currently have over 50,000 "Low-Cost, High-Return" tabletop payphones in service. Research today shows that 1/2 million locations nationwide would benefit from this product and the numbers continue to grow.*

• *Profit Phone payphones comes in a small tabletop design suitable for any business environment, and can be wall mounted in our theft resistant steel lock-up banker.*

A1-27

**TELCO INTERCONTINENTAL CORPORATION****PROFIT PHONE® MODELS: 707 / 727-20 / 727-25
CAPABILITIES & FEATURES**

Our state of the art programming is done on an EPROM chip, the same as our 757 and 767 models. Although the programming is not as elaborate as our fully programmable phones, never the less, they are designed to meet your requirements and those of your customers. We can guarantee that when your phones are programmed here at the factory, they will never lose their programming due to customer abuse, lightening storms or line surges.

Chip Functions (Factory Programmed)

For those areas that have more than one local area code, we can program in as many area codes as needed for the local calling area, whether you have customers that have eleven digit local calls or ten digit local calls. We can have chips made available on a moments notice.

Board Modification (Factory)

Beeper access is available for digital pagers, voice mail systems and answering machines; free access or charge is available.

Owner Control - Dip Switches

(See instruction sheet that accompanies the phone)

Through dip switch settings, the owner has control over the following.

- Outgoing calls can be timed from one to sixteen minutes, or unlimited
- The phone's ringer can be turned on or off to restrict incoming calls
- Operator calls can be restricted or allowed as free.
- 1-411 & 411 calls can be restricted or allowed as free.

And, with the "coin-free" key you can turn the phone into a standard phone, allowing any type of call desired.

All of Telco's phones are U.L. & F.C.C. Registered & Approved
Copyright (c) 1994 by Telco Intercontinental Corporation

TELCO INTERCONTINENTAL CORPORATION

PROFIT PHONE® MODELS: 757 & 767 CAPABILITIES & FEATURES

Our state of the art programming is done on an EPROM chip and offers:

1. Beeper and voice mail access.
2. Up to 10 phone numbers (in addition to 911, 1-800 and 0) can be programmed for free calls; ⁵¹⁷
ic., business numbers for sales, service and refunds, or the business owner's home number. ¹⁻⁸⁰⁰
3. 411, 1-411, 555-1212, 1-555-1212, 1-XXX-555-1212 and 1-800 numbers can be charge ^{1-800, 877}
calls, or included as one of the 10 free calls.
4. The escrow capacity ranges from 25¢ to \$1.50 on the model 757, and 10¢ to \$1.00 on the multi-coin model 767.
5. Numbers restricted by default are 00, 01, 011, 900, 950, 1-950, 1-XXX-950, 976 1-XXX-976, 907, 808, 809 and any X11 number not specified above. Any of these numbers can be unblocked.
6. For both models, incoming calls may be restricted (through the ringer) or allowed by adjusting the switches located on the bottom of the phone (see the instructions that accompany the phone). Both models can be programmed to charge for outgoing calls. Time limits can be programmed for periods from 1 to 16 minutes. After an initial free period, each additional period will be charged.
7. For residual income on credit card and collect calls, we can either program your 10XXX access code into the chip for your long distance operator or have you pre-subscribe to the operator service provider of your choice. Your local operator can be programmed behind the star key for local access. Please note that your area call patterns may play a part in which way we program the chips. Operator access can be restricted or allowed by adjusting the dip switch.
8. For seven digit local, ten digit local, ten digit toll, one plus seven and long distance outgoing calls, an initial rate and time period (1 - 16 minutes) can be programmed. For the remainder of the call, a different rate and time period can be programmed.
9. Specific charges for individual prefixes, calling zones and area codes are virtually unlimited. For areas with seven digit toll zones, we will need up to date copies of those prefixes to provide the most accurate programming for your phones.

All of Telco's phones are U.L. & F.C.C. Registered & Approved.

TELCO INTERCONTINENTAL CORPORATION

DEFINITION OF TERMS

- ANI** - Automatic Number Identification; how the Bell company identifies your line
- PUC/PSC** - Public Utilities Commission / Public Service Commission; establishes utility regulations for your state, including payphone regulations
- OSP** - Operator Service Provider; can be contracted to provide operator services, as a source of extra revenue from operator assisted calls
- AOS** - Alternate Service Provider; similar to (and in most cases replaced by) OSP
- Escrow** - the amount of coins the phone can hold at one time, the escrow is deposit for completed calls and returned for incomplete calls
- LEC** - Local Exchange Carrier; your Bell company, provides billing for your local calls
- IXC** - InterExchange Carrier; your regional (baby) Bell company; works with LEC
- LATA** - Local Access Transport Area; the geographical area wherein your LEC provides services
- IntraLATA** - Calls whose origin and destination is within your LATA
- InterLATA** - Calls whose origin is in your LATA but whose destination is in another LATA in your state
- InterLATA-Interstate** - Calls whose origin is in your LATA but whose destination is in a LATA in another state

Types of calls (these calls may or may not apply to your area):

- | | |
|--|--------------------------------------|
| 0 - for operator assisted calls | 976 - for pay per call service calls |
| 00 - to reach the long distance operator | 950 - for special access calls |
| 01 - to reach international operator | 10XXX - for access code calls |
| 011 - for direct international calls | 211 - for local directory assistance |
| 0+XXX - for operator assisted L.D. calls | 411 - for local information |
| 1+XXX - for direct long distance calls | 555-1212 - for directory assistance |
| 1+XXX-XXXX - for toll calls | 611 - payphone repair call |
| 900 - for pay per call service calls | 1+800 - for 800 access calls |

Bands or Rate Bands - bands define your calling areas, you can program the same or different rates for each band; they are generally defined as:

- Band One - Seven digit calling plus any local area codes
- Band Two - Seven or 1+Seven digit toll local calls
- Band Three - Seven or 1+Seven digit toll calls with a higher rate than band two
- Band Four - 1+Ten digit (1+Area Code + Seven digit) long distance calls within your state
- Band Five - 1+Ten digit (1+Area Code + Seven digit) long distance calls out of your state

Bands One, Two and Three are local bands; Band Four is an intraLATA band; Band Five is an interLATA-interstate band

All of Telco's phones are U.L. & F.C.C. Registered & Approved.
